

Hichrom Short Seminars – opportunities to improve your skills - for busy chromatographers

A series of short (1-2 hour), low cost seminars exploring a wide range of topics. These courses represent valuable opportunities to improve your skills and knowledge in key areas of chromatography and keep up-to-date with the latest developments

Who should take these courses?

These short seminars aim to provide busy chromatographers with the opportunity to keep up-to-date with the latest developments and key skills in the industry, without placing burdensome demands on hectic work schedules. If you are involved in practical, 'hands-on' chromatography and want to stay ahead of the competition, then these low cost, concentrated learning experiences are ideal for you. These seminars last approximately 1 to 2 hours and can be delivered as breakfast, lunch or evening seminars (or any other time!), either at your company or at a venue local to you, at a convenient date and time. Following the main seminar, an opportunity for delegates to stay on for an open Q&A session, or a more in-depth discussion about a specific problem or topic, can be arranged.

An Introduction to LC Method Translations

This short course introduces the analyst to isocratic and gradient method translations, including adjusting column dimensions (eg. scaling a method up or down); moving between different instruments (eg. transferring a method between sites) and modifying particle platforms (eg. between fully porous and solid-core silica particles). The course will introduce the theory and illustrate each situation with a number of practical examples including data for successful translation and common reasons for failed method translations. A 'hints' and tips' section will also be included.

- Translating methods theory
- HPLC to UHPLC and vice versa
- Instrument to instrument
- Different particle platforms
- Examples of success and failure
- Hints and tips section

Available as an in-house or off-site course. Contact us for details
