

Hichrom Short Seminars – opportunities to improve your skills - for busy chromatographers

A series of short (1-2 hour), low cost seminars exploring a wide range of topics. These courses represent valuable opportunities to improve your skills and knowledge in key areas of chromatography and keep up-to-date with the latest developments

Who should take these courses?

These short seminars aim to provide busy chromatographers with the opportunity to keep up-to-date with the latest developments and key skills in the industry, without placing burdensome demands on hectic work schedules. If you are involved in practical, 'hands-on' chromatography and want to stay ahead of the competition, then these low cost, concentrated learning experiences are ideal for you. These seminars last approximately 1 to 2 hours and can be delivered as breakfast, lunch or evening seminars (or any other time!), either at your company or at a venue local to you, at a convenient date and time. Following the main seminar, an opportunity for delegates to stay on for an open Q&A session, or a more in-depth discussion about a specific problem or topic, can be arranged.

Theory & Practice of Using Solid-Core Technology

Solid-core technology is the latest innovative particle technology for UHPLC/HPLC separations. This seminar examines the theory behind the increased efficiency, faster analysis and lower back pressure claims, before discussing practical aspects for rapid method development with optimised work flows. There will be a focus on chromatographic selectivity with solid-core particles and how it can be exploited to maximise analyte resolution for various analyte mixtures and classes.

- Solid-core theory and practice
- Method development
- Selectivity and how to use it
- Practical hints and tips
- Real examples and data
- Summary and conclusions

Available as an in-house or off-site course. Contact us for details
