LiChrospher®

- Spherical porous silica
- Base deactivated LiChrospher RP-select B
- Endcapping options for RP-8 and RP-18
- Hichrom high efficiency packed columns

LiChrospher® is a traditional silica manufactured by Merck Millipore. The availability of both endcapped and non-endcapped C8 and C18 phases significantly enhances the chromatographer's selectivity options. LiChrospher RP-select B was Merck's first generation base deactivated material. A range of 4µm materials has been marketed under the Superspher® tradename in Europe.

Merck Cartridge System

LiChrosorb®, LiChrospher® and Superspher® are available in Merck's LiChroCART® cartridge system used with manu-CART® end fittings. These columns can be used with or without an integral guard cartridge. The integral guard can be incorporated on reversing the split collets within the end fittings (Figure 1).

Merck Hibar RT columns are also available on request. Please contact us.
